★ **Group member details:**

1. VIVEK SHAURYA (21803013),(B12A)
2. HARSHIT VIJAY (21803015),(B12A)
3. ANMOL VERMA (21803014), (B12A)
4. ROHIT GUPTA (21803018)(B12)

★ **Brief introduction about Project:**

This project will start with giving the users a friendly user interface to login by using a given userId and password. This project completely focuses on the administrator and the teacher prospective, which can be achieved by using different classes to maintain the data. After login the user gets their specific interface where they can perform certain functions like the administrator can obtain all the teacher data, can manage and review all their attendance and directly give notice to all the teachers. On the other hand the teacher can perform other functions like managing, reviewing and taking student attendance. They can obtain all the information about the students and can make a list of assignments and notes given to the students.

All the aspects of object-oriented in c++ will be used to manage the data of the students and teachers. The whole data will be stored in the SQL database which can be accessed easily by the user. More features might get added before submission of the final project.
